

SilverDoor Technology Integrated with SAP Concur

Further enhancing their technology offering to clients, SilverDoor Apartments has successfully integrated their OrbiRelo technology with leading expense management system SAP Concur.

Noting that many of their largest clients utilised SAP Concur for their travel expense management, SilverDoor integrated their OrbiRelo technology with the service via a new app developed in collaboration with SAP Concur. OrbiRelo is SilverDoor's revolutionary booking technology, which offers a seamless booking experience to clients and digitises all aspects of their account – from traveller tracking to billing – in a single, easy-to-use software package.

The application enables SilverDoor clients to link their OrbiRelo account with SAP Concur; meaning all client booking invoices are automatically uploaded to the Concur system for dedicated expense management. This addition to OrbiRelo technology has been enthusiastically welcomed by clients as the collaborative application considerably improves the efficiency of billing and expense management. As a result, SilverDoor is able to offer a very attractive all-round service package – making OrbiRelo's technology the best of its kind in the sector.

SilverDoor's Group Head of Client Relationships, Martin Klima, said of the integration "Ensuring we offer the best level of digitisation to our clients has always been a priority for SilverDoor, and this additional offering further benefits our clients' needs. Streamlining the service we provide to clients and integrating with business technology leaders such as SAP Concur promotes not only our agency but also the serviced apartment sector as a whole. This integration is recognition of our relevance in the market; something we aim to continue demonstrating through further integrations in the future."

The Orbi app can be viewed and accessed here:
